                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Seq. 12:285-287(2001).

FUNCTION: Has phospholipase and triglyceride lipase activities.

Hydrolyzes high density lipoproteins (HDL) more efficiently than
                                                                                                                                                                                                                                                             fatty acid anion.
SUBCELLULAR LOCATION: Secreted (By similarity).
MISCELLANDOUS: It is termed endothelial lipse due to the fact
that it is synthesized in endothelial cells, a characteristic that
distinguishes it from other members of the family. However this
protein is also expressed in other cell types.
SIMILARITY: BELONGS TO THE ABHYDROLASE SUPERFAMILY. LIPASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hydrolyzes high density lipoproteins (HDL) more ef other lipoproteins. Binds heparin (By similarity). CATALYTIC ACTIVITY: Triacylglycerol + H(2)0 = diac

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB DB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ANY15618-Y15759 represent peptides used to make the fluorogenic or CC fluorescent reporter molecules of the invention. These molecules CC contain a peptide molety (e.g. present sequence) which acts as a CC substrate for enzymes involved in apoptosis or protease or peptidase CC enzymes. The compounds can be used as fluorogenic or fluorescent CC substrates for enzymes. Depending on the peptide molety used, the CC fluorescent molecules can be used for detecting or measuring the CC activity of an enzyme involved in the apoptosis cascade in cells; to CC determine whether a test compound has an effect on an enzyme involved CC in the apoptosis cascade in cells; for determining the sensitivity of CC an animal with cancer to treatment with chemotherapeutic agents or CC enhances cell death of test cells; for determining whether a test substance in cells; for determining whether a test compound has an effect on the activity of a viral protease in cells; CC and for measuring the activity of a protease or peptidase in cells; can defect on the activity of a protease in cells; compound has an effect on the activity of a protease or peptidase in cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The invention

relates

6

fluorescently labelled

peptides

activity of an

enzyme

involved) be used volved in

apoptosis

or measuring cascade in c

substrate for enzymes involved in apoptosis or protease or peptidase enzymes. The compounds can be used as fluorescent or fluorescent substrates for enzymes. Depending on the peptide molety used, the fluorescent molecules can be used for detecting or measuring the

a peptide moiety (e.g. pre te for enzymes involved in

```

They are of the structure peptide-Y-Z, where Z represents a halo-substituted benzoyl blocking group, Y is a fluorescent or fluorigenic moiety (preferably a rhodamine), and the peptide-Y bond is cleavable by the enzyme being assayed. The labelled peptides are reporters for detecting intracellular proteolytic enzymes, particularly caspases and other enzymes involved in apoptosis; viral proteases (e.g., HIV, herpes simplex virus-1, human cytomegalovirus and hepatitis C virus proteases); and methionine aminopeptidase type 2 (MetAP-2). The peptides are particularly used to identify modulators of these enzymes which may be potentially useful as

Modulators identified may also be used to prolong the life of cells being cultured for recombinant protein production, or to monitor the treatment of cancer with chemotherapeutic agents. Inhibitors of MetAP-2 are potential anti- angiogenic or anticancer agents. Sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           determine whether a test compound has an effect on an enzyme involved in the apoptosis cascade in cells; for determining the sensitivity of an animal with cancer to treatment with chemotherapeutic agents or determining whether a test substance inhibits, prevents, causes or enhances cell death of test cells; for detecting or measuring the activity of a viral protease in cells; for determining whether a test compound has an effect on the activity of a viral protease in cells; and for measuring the activity or determining whether a test substance
 The invention relates to fluorescently labelled peptides containing a halobenzoyl group on the fluorophore. They are of the structure peptide-Y-Z, where Z represents a halo-substituted benzoyl blocking group, Y is a fluorescent or fluorigenic moiety (preferably a rhodamine), and the peptide-Y bond is cleavable by the enzyme being assayed. The labelled peptides are reporters for detecting intracellular proteolytic enzymes, particularly caspases and other enzymes involved in apoptosis; viral proteases (e.g., HIV, herpes simplex virus-1, human cytomegalovirus and hepatitis C virus proteases); and methionine aminopeptidase type 2 (MetAP-2). The peptides are particularly used to identify modulators of these enzymes which may be potentially useful as agents for treating conditions such as cancer, neurodegeneration,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

Modulators identified may also be used to prolong the life of cells being cultured for recombinant protein production, or to monitor the treatment of cancer with chemotherapeutic agents. Inhibitors of MetAP-2 are potential anti- anglogenic or anticancer agents. Sequences AAY80782-Y80910 represent peptides, some of which are specifically claimed, which may be used in assay methods according to the invention.
                                                                    method is used for the propagation (preferably, seedless propagation) of a plant from a plant starting material in an in vitro culture method. Nucleic acids encoding receptor-like kinases are useful in the method. The present sequence is a fragment of a receptor-like kinase protein.
                                                                                                                     The present invention relates to a culture method for propagating a plant from a plant starting material, where root or shoot initiation is stimulated by introducing a gene into the starting material which allows the reduction or absence of phytochrome addition to the culture. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vegetative propagation; RKS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A thaliana receptor kinase

The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, justed the central nervous system, gastrointestinal diseases, gastrointest

                                                                         Staphylococcus aureus CHIPS-related peptide #491
                                                                                                                                                                                                                                                                                                                                                                                               cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases and HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5ax) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include
                                                                                                           10-JUN-2003
                                                                                                                                          ABR45301;
                                                                                                                                                                    ABR45301 standard; Peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Combination of peptides derived from chemotaxis inhibiting protein from Staphlylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases
                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003-247783/25

The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, is genitourinary diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    joint disease; respiratory disease; HIV infection; antiinflammatory; cardiant; cerebroprotective; neuroprotective; nootropic; dermatologigynecological; immunosuppressive; anti-HIV.

The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, diseases, respiratory diseases and HTV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Combination of peptides derived from chemotaxis inhibiting protein Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and

Á.

The present invention relat ABR47164-ABR47385) derived from Staphylococcus aureus.

invention relates to peptides (ABR44811-ABR47162 and R47385) derived from the Chemotaxis Inhibitory Protein lococcus aureus. The peptide fragments are useful in

(CHIPS)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10-JUN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to peptides (ABR44811-ABR47162 and ABR47164) derived from the Chemotaxis Inhibitory Protein (CHIPS from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases and HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABR46029
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABR46029 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint
                            The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial celis or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint gastrointestinal diseases, skin diseases, genitourinary diseases, joint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                            Combination of peptides derived from chemotaxis inhibiting protein Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         formylated peptide receptor; FPR; neutrophil; monocyte; endothelial inflammation; cardiovascular disease; central nervous system disease gastrointestinal disease; skin disease; genitourinary disease; joint disease; respiratory disease; HIV infection; antiinflammatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cardiant; cerebroprotective; neuroprotective; nootropic;
gynecological; immunosuppressive; anti-HIV.

                       The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein is from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, diseases, respiratory diseases and HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                              The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (C from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, jc diseases, respiratory diseases and HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CHIPS; Chemotaxis Inhibitory Protein; C5a-receptor; C5aR; formylated peptide receptor; FPR; neutrophil; monocyte; endothelial cell; inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; genitourinary disease; joint disease; respiratory disease; HIV infection; antiinflammatory; cardiant; cerebroprotective; neuroprotective; nootropic; dermatological;
